

**Got a plan?**

**Get Viságe.DRS  
NOW!**

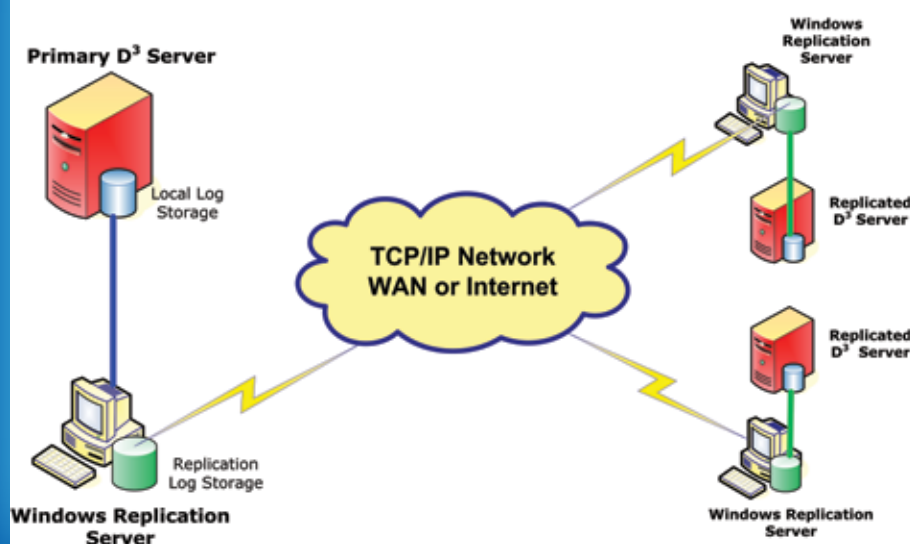

**V**iságe.DRS is an essential component of any D<sup>3</sup> disaster recovery plan, and also solves the problem of the ever decreasing window of time available for traditional backup strategies.

It doesn't matter if your systems run 24/7 or just 9-5, the Viságe Data Replication Service will help protect your valuable corporate data by efficiently replicating it to one or more replication servers, across the building or across the globe!

## Why Viságe.DRS?

In the event of a catastrophic system failure you need to get your systems back online *FAST*. You don't have time to load your last full backup, restore from an incremental save, replay a transaction log (assuming you can retrieve this from the failed system), and then wait for indices to rebuild. With Viságe.DRS you can be back online in a matter of minutes, not hours or days.

## Viságe.DRS

## What about D<sup>3</sup> Hot Backup?

For a start, Hot Backup isn't available to D<sup>3</sup>NT systems, nor does it offer the added security of multiple replicated servers and redundant logs, auto-recovery from network transport failures, delta transmission confirmation, clean system replication from dirty backups, set and forget GUI administration, pro-active self management – the list goes on.

## How does Viságe.DRS work?

Viságe.DRS logs don't consume overflow, so don't contribute to file fragmentation, and can be on a physically separate drive than your database to minimize I/O contention. Log transmission and processing is offloaded to another system, freeing the database to concentrate on being just a database, and reducing CPU processing load.

## Do I need a special D<sup>3</sup> licence?

**NO!** Each replicated server does require a D<sup>3</sup> licence, but a single user system could be used to replicate a 1,000 user environment. In the event of a system failure you would simply re-activate one of your backup servers with your primary licence, just like you would do if your disaster recovery plan required you to source a new server.

## How is Viságe.DRS Licensed?

We wanted Viságe.DRS to be affordable for everybody, and have adopted a simple, low cost annual subscription model based on the number of users on your primary/replicated server, and the number of servers you wish to replicate to.
